## WEEK 2 Power BI Report

Microsoft's Power BI is a business analytics tool designed to provide users with comprehensive data analysis and visualization capabilities. It empowers organizations to connect to a wide array of data sources, ranging from simple Excel sheets to complex databases, and transform this data into interactive, insightful dashboards and reports. With Power BI, users can create and share reports that highlight key performance indicators (KPIs) and trends, facilitating informed decision-making across all levels of an organization. Its features include real-time analytics, the ability to perform ad-hoc analysis, and seamless integration with other Microsoft products, such as Azure and Office 365, which enhances productivity and collaboration. Power BI's interface and robust data modeling options make it accessible to data professionals and business users alike, ensuring that valuable data insights are always at your fingertips. Throughout this course, you'll learn how to use these tools made available by Power BI and acquire the skills to start building your own reports and start analyzing data like a pro. The course focuses on the main components of Power BI Desktop. These sections highlight the features available in Power BI Desktop and walk the user through the process of bringing in data from data sources, organizing data in a model, and creating visualizations. This course includes steps for users to follow along, accompanied by associated screenshots that provide visual aids. In the screenshots, sections are highlighted with red boxes to indicate the area the user needs to focus on tools.

### OVERVIEW OF MICROSOFT POWER BI

Cloud-based business intelligence Power BI is a cloud-based business intelligence service that provides a single view of your most critical business data, accessible from anywhere with internet access. Data integration and connectivity. With Power BI, you can connect to a wide range of data sources, including Excel, SQL Server, and cloud-based data services, and create interactive dashboards and reports that provide actionable insights. Interactive dashboards and reports Power BI allows you to create interactive, immersive dashboards and reports that provide actionable insights and drive business results.

### BENEFITS OF USING POWER BI

Ease of Use Power BI's drag-and-drop interface makes it easy for even non-technical users to create stunning visualizations and interactive reports. Real-Time Updates Power BI provides real-time updates, allowing you to stay on top of your data and make informed decisions. Mobile Access Power BI's mobile app allows you to access your data and reports from anywhere, making it easy to stay connected and make informed decisions on the go.

## CONNECTING DATA SOURCES TO POWER BI

**Data Connectors in Power BI:** Power BI provides a wide range of data connectors that enable you to connect to popular data sources such as Excel, SQL Server, and SharePoint. These connectors help you to access data from different sources and create a unified view of your data for analysis. Connecting to Excel Data Sources. Excel is a popular data source and can be easily connected to Power BI. You can connect to an Excel workbook stored in OneDrive or SharePoint, or you can upload an Excel workbook directly to Power BI.

**Connecting to SQL Server Data Sources**: SQL Server is a popular database management system and can be easily connected to Power BI. You can connect to a SQL Server database hosted in the cloud or on-premises, and you can use DirectQuery or Import mode to access your data.

## CREATING VISUALIZATIONS

Types of Visualizations Power BI provides a wide range of visualization types, including charts, tables, and maps, that enable you to create stunning reports and dashboards.

**Customizing Visualizations:** Power BI enables you to customize your visualizations to meet your specific needs, such as adding labels, filters, and formatting options.

## BUILDING DASHBOARDS

**Dashboard Design**: Effective dashboard design plays a crucial role in conveying actionable insights to the stakeholders. We will learn how to design an intuitive dashboard layout that provides a 360-degree view of your most critical business data.

**Data Visualization**: Adding the right visualizations to your dashboard can help you convey insights more effectively. We will explore how to choose the right visualizations for your data and how to create them using Power BI tools. Dashboard Publishing Publishing your dashboard to the Power BI service is an important step in sharing your insights with the stakeholders. We will learn how to publish your dashboard to the Power BI service and how to share it with others.

**DATA MODELING IN POWER BI**: The data modeling engine in Power BI provides a powerful tool that can transform raw data into a structured format that can be easily analyzed. This enables you to create complex data models that can be used to drive your business decisions.

## POWER QUERY EDITOR

**Data Transformation Power Query Editor** is a powerful data transformation tool that enables you to clean, reshape, and combine data from multiple sources. You can use Power Query Editor to perform a wide range of data transformations, including filtering, sorting, grouping, and merging data from different sources.

**Data Cleansing Power Query Editor** enables you to clean your data by removing duplicates, filling in missing values, and correcting inconsistent data. You can use Power Query Editor to perform data cleansing tasks on different types of data, including text, numbers, and dates.

**Data Reshaping Power Query Editor** enables you to reshape your data by pivoting columns, unpivoting rows, and transposing data. You can use Power Query Editor to reshape your data in a way that makes it easier to analyze and visualize in Power BI.

## POWER BI ADMINISTRATION

**Security and Access Controls Power BI** provides a range of security and access control features that enable you to control who has access to your data and how they use it. We will explore how to set up security groups, manage roles and permissions, and configure row-level security.

**Usage Monitoring Power BI** provides a range of usage monitoring features that enable you to track how your data is being used and identify any issues or anomalies. We will explore how to monitor usage metrics, set up alerts, and configure usage reports.

**Data Refresh Settings Power BI** provides a range of data refresh settings that enable you to control how frequently your data is refreshed and ensure that the data is up to date. We will explore how to configure data refresh schedules, manage data sources, and troubleshoot data refresh issues.

# Power BI Development: Stepwise Implementation Report

# Phase 1: Data Preparation & Import

## Step 1: Initial Setup

- Open Power BI Desktop.
- Create a new report named **MyFirstPowerBIModel**.
- Import multiple CSV files:
    - Sales.csv
    - InternationalSales.csv
    - Geography.csv
    - Manufacturer.csv
    - Product_Table.csv

## Step 2: Power Query Transformations

1. **Table Renaming**:
    - Rename imported tables for clarity:
        - Sales → Sales
        - geo → Geography
        - manufacturer → Manufacturer
        - Product_Table → Product
        - InternationalSales → International Sales
2. **Product Table Cleaning**:
    - Fill Down nulls in the *Category* column.
    - Split *Product* column by pipe delimiter ("|"):
        - Rename *Product.1* → Product
        - Rename *Product.2* → Segment
    - Split *Price* column into *MSRP* (fixed decimal) and *Currency* (text) using Column From Examples.
    - Remove original *Price* column.
3. **Geography Table Cleaning**:
    - Remove top 2 rows (unnecessary headers/info).
    - Use first row as headers.
    - Change *Zip* data type to Text.

4. **Manufacturer Table Cleaning**:
    - Remove bottom 3 rows.
    - Transpose the table.
    - Use first row as headers.

5. **Data Consolidation**:
    - Append *Sales* and *International Sales* queries.
    - Add conditional column *CountryName*:
        - If *Country* is null → "USA"
        - Else → *Country* value.
    - Remove original *Country* column.
    - Rename *CountryName* → *Country*.
    - Disable load for *International Sales* query.

### Step 3: Data Type Finalization

- In *Sales* table:
    - Set *Revenue* to Fixed decimal number.
    - Set *Country* to Text.
- In *Product* table:
    - Set *MSRP* to Fixed decimal number.
    - Set *Currency* to Text.
- Apply changes and close Power Query Editor.

## Phase 2: Data Modeling & Relationships

### Step 4: Create Missing Relationships

- Problem: Many-to-many between Sales and Geography tables.
- Solution: Create *ZipCountry* calculated columns in both tables by concatenating *Zip* and *Country*.
- Create relationship between Sales[ZipCountry] and Geography[ZipCountry].
- Result: 1-to-many relationship established.

### Step 5: Create Date Table

- In Table View, select Table Tools → New Table.
- Enter DAX formula:
  Date = CALENDAR(DATE(2014,1,1), DATE(2022,12,31))
- Change *Date* column data type to Date.
- Create relationship between Date[Date] and Sales[Date].
- Update visuals to use the new Date table's *Date* field.
- Hide technical fields from Sales, Geography, Manufacturer, and Product tables to reduce clutter.

# Phase 3: Visualization Development

### Step 6: Basic Visuals Creation

- Create Clustered Column Chart:
    - X-axis: Country (from Geography)
    - Y-axis: Revenue (from Sales)
    - Sort descending by Revenue.
- Add Manufacturer to Legend → Change chart to Stacked Column.
- Apply Top N filter on Manufacturer by Revenue (Top 5).

### Step 7: Advanced Visuals Implementation

- Treemap visual: Market share by Manufacturer.
- Convert bar chart to Matrix visual:
    - Rows: Product hierarchy (Category → Segment → Product).
    - Values: Revenue twice, second as % of grand total (%GT Revenue).
- Add Card visual to show total Revenue.

### Step 8: Time Intelligence Measures

- Create measure for Prior Year Sales:
  PY Sales = CALCULATE(SUM(Sales[Revenue]),
  SAMEPERIODLASTYEAR('Date'[Date]))
- Create measure for Percentage Growth:
  % Growth = DIVIDE(SUM(Sales[Revenue]) - [PY Sales], [PY Sales])
- Format measures appropriately (percentage, currency).
- Add these measures to the Matrix visual.

# Phase 4: Interactive Features

### Step 9: Hierarchies Creation

- Implicit hierarchy for visual: Country → State → District.
- Explicit hierarchy in data model:
    - Create *Product Hierarchy* from Category, Segment, and Product fields.

### Step 10: Data Grouping

- Group Manufacturers into:
    - Top Competitors (Fabrikam, Nod Publishers, Tailwind Traders, Wide World Importers)
    - VanArsdel, Ltd.
    - Others
- Apply this grouping to visuals.

### Step 11: Filter Implementation

- Add page-level filter for Manufacturer groups.
- Create slicer for Manufacturer with dropdown style.

### Step 12: Drill Functionality

- Enable drill-down in time visual for Year → Quarter → Month.
- Enable drill-down in Matrix visual for Product category → Product.
- Sort Matrix by %GT Revenue descending.

## Phase 5: Report Design & Branding

### Step 13: Visual Formatting

- Format axes with bold and italic styles.
- Enable and disable total labels as needed.
- Resize visuals for clean layout and avoid overlaps.

### Step 14: Professional Design Elements

- Add background image to canvas (Background.jpg) with 0% transparency.
- Insert company logo (VanArsdel_Logo.png) and position top-left.
- Create report title "Manufacturer Analysis" with white font color and size 20.
- Set title background transparency to 100%.

### Step 15: Custom Visuals Import

- Import custom visual "Play Axis (Dynamic Slicer)" from marketplace.
- Add to canvas and assign Date field.
- Enable "Show all" colors.
- Resize and position visual appropriately.

# Phase 6: Storytelling & Navigation

### Step 16: Bookmarks Creation

- Enable Bookmarks pane.
- Create bookmarks:
    - Initial State (default view).
    - USA Revenue (with USA column spotlighted).
    - Australia Revenue (with Australia column selected).
- Add bookmark navigator buttons.
- Format buttons with light blue fill, 40% transparency, rounded rectangle shape.

### Step 17: Final Layout Arrangement

- Arrange visuals on canvas: logo, title, navigation, country chart, treemap, time analysis, matrix, play axis, revenue card, bookmark navigation.

### Step 18: Final Testing

- Test cross-filtering, drill functionality, bookmark navigation, slicer filtering.
- Validate calculations and time intelligence.
- Check performance for smooth interactions.

# Phase 7: Finalization

### Step 19: Save & Document

- Save report as *MyFirstPowerBIModel.pbix* in DIAD Reports folder.
- Document Power Query steps, DAX formulas, and relationship diagram.
- Prepare stepwise implementation report.

### Step 20: Export Readiness

- Optimize file for Power BI Service.
- Validate all data connections.
- Note security and sharing considerations.
- Prepare user guide for bookmark navigation and filter usage.
- Include contact info and key insights.

# Summary Power BI Development: Stepwise Implementation

## Phase 1: Data Preparation & Import

- Open Power BI Desktop and create **MyFirstPowerBIModel** report.
- Import CSV files: Sales, InternationalSales, Geography, Manufacturer, Product_Table.
- Use Power Query Editor to clean and transform data: renaming tables, splitting columns, filling nulls, removing unnecessary rows, and appending sales data.
- Finalize data types and apply changes.

## Phase 2: Data Modeling & Relationships

- Resolve many-to-many relationships by creating calculated columns.
- Establish relationships between tables including a dedicated Date table.
- Hide unnecessary technical fields.

## Phase 3: Visualization Development

- Create basic visuals: clustered column charts, stacked columns, treemaps, matrix visuals, and KPI cards.
- Add time intelligence measures for prior year sales and growth percentage.

## Phase 4: Interactive Features

- Create implicit and explicit hierarchies.
- Group manufacturers into meaningful categories for filtering.
- Add slicers and page-level filters.
- Enable drill-down functionality.

## Phase 5: Report Design & Branding

- Format visuals with styling such as bold and italic axis labels.
- Add company branding including logo and background images.
- Create report title with appropriate formatting.
- Import and configure custom visuals like Play Axis.

## Phase 6: Storytelling & Navigation

- Use bookmarks to create interactive story points highlighting USA and Australia revenues.
- Add bookmark navigator buttons styled with transparency and rounded shapes.
- Arrange visuals and navigation elements for an intuitive user experience.

## Phase 7: Finalization

- Test interactions, filters, drill-downs, and bookmark navigation.
- Validate data accuracy and performance.
- Save the report and document all development steps.
- Prepare the report for publishing and user guidance.

## CONCLUSION

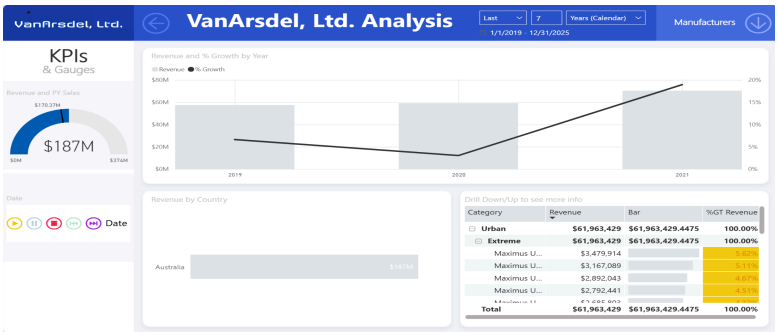

Power BI connects diverse sources (Excel, SQL Server) via connectors, supporting Import/DirectQuery modes for unified analysis. Drag-and-drop visuals (charts, treemaps, matrices) enable customization with labels, filters, and hierarchies, while real-time updates and mobile apps ensure accessibility. Benefits include ease for non-technical users, collaboration via Office 365, and monitoring tools for trends.

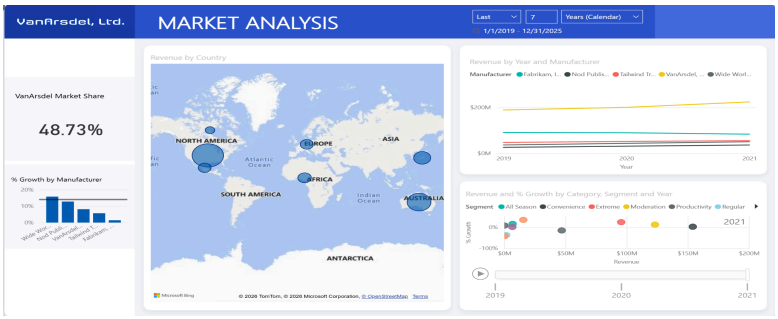

**Powerful data analytics** Power BI provides powerful data analytics that enable businesses to make informed decisions.

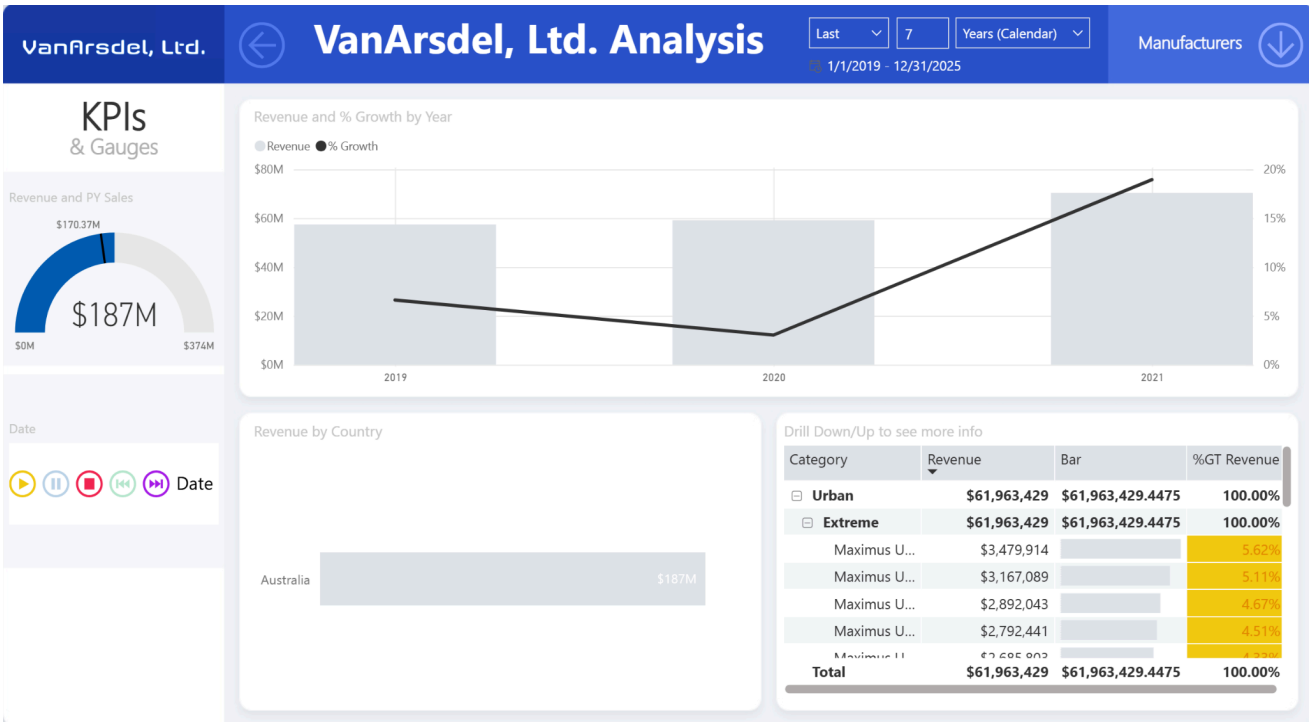

**User-friendly interface** Power BI has a user-friendly interface that makes it easy for business users to create and share reports.

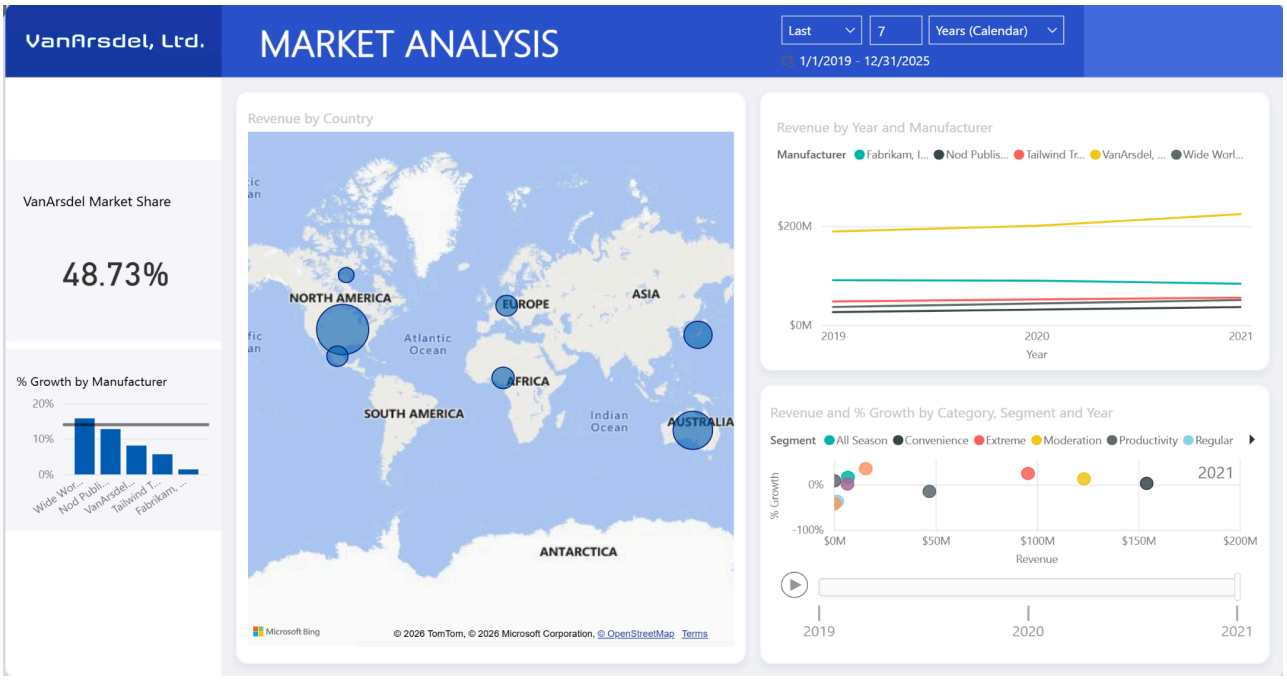

**Real-time data monitoring** Power BI allows businesses to monitor data in real-time, making it easy to identify trends and make quick decisions.

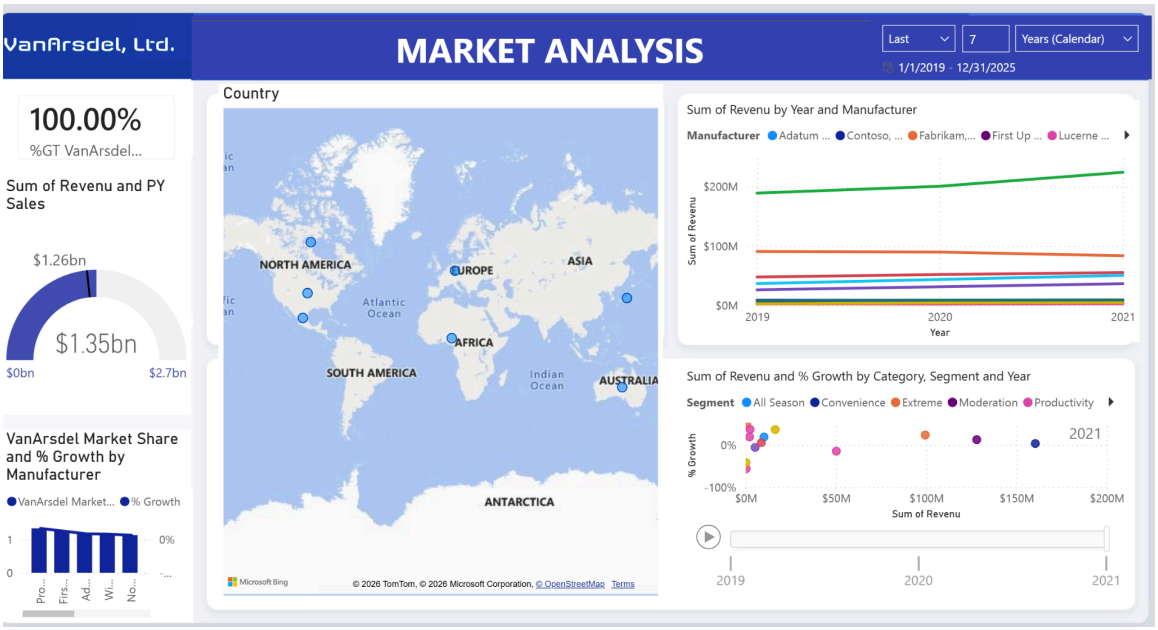

**Collaboration and sharing** Power BI enables business users to collaborate and share reports easily, improving communication and decision making.
